1. Claims 1-11, and 13-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Arvidson et al. (5123554). Arvidson teaches a container having a rectangular vacuum panel, a plurality of ribs as claimed and the ribs are either outward facing or inward facing as claimed.

Regarding claim 2, note there are 29 ribs in each panel.

2. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Arvidson in view of Ota. It would have been obvious to one of ordinary skill in the art to make the container from PET to provide the desired material for the bottle.

3. Applicant's arguments have been fully considered but they are not persuasive. With respect to the Arvidson rejection, applicant asserts that Arvidson does not disclose both inwardly and outwardly projecting rounded edges, and each of the ribs in Arvidson are inward of the container. It is submitted that the claim recites the ribs being "relative to a space defined by the sidewalls. In Fig. 9, Arvidson show the alternating ribs outwardly projecting and inwardly projecting relative to a space defined by the sidewalls. Note that the term "space" is broad and it can be any point between the apexes of the alternating ribs in Arvidson.
